

Desi Tracker

Mobile App vs Website

Complete Feature Analysis

Project: Desi Tracker
Report: Full Feature Comparison & Gap Analysis
Date: May 2026

Overall Completion: ~60%

Table of Contents

1. Project Overview
2. Tech Stack Comparison
3. Authentication Feature Comparison
4. Business Registration Feature Comparison
5. Order Pad Feature Comparison
6. Critical Issues (Broken / Stubs)
7. Missing Features (Website has, App doesn't)
8. Partial Features (Incomplete in App)
9. Working Features (Both have)
10. Full Screen Inventory
11. Backend API Analysis
12. Security Gaps
13. Dead Code in App
14. Summary & Recommendations

1. Project Overview

Desi Tracker is a business directory and management platform with three main components:

Backend: Node.js/Express/MongoDB API serving both web and mobile

Website: Next.js 15 (App Router) / React 19 / TypeScript web application

Mobile App: Expo SDK 54 / React Native 0.81 / JavaScript mobile application

The platform supports three user types: Business Owners, Members (QR-card loyalty), and Admins. Key features include business listing, product management, order taking (POS), member verification, reviews, bookings, rota management, and fridge temperature logging.

2. Tech Stack Comparison

Component	Backend	Website	Mobile App
Language	TypeScript 5.7	TypeScript	JavaScript
Framework	Express 4.21	Next.js 15.2	Expo SDK 54
UI Library	N/A	React 19	React Native 0.81
Database	MongoDB/Mongoose 8	N/A (API client)	N/A (API client)
State Mgmt	N/A	Redux Toolkit + RTK Query	Redux + RTK Query + Axios
Forms	Mongoose validators	react-hook-form	Manual state + Alerts
Styling	N/A	Tailwind CSS 4.1	StyleSheet (inline)
Navigation	Express Router	Next.js App Router	React Navigation v6
Notifications	N/A	react-hot-toast	Native Alert dialogs
Icons	N/A	react-icons	lucide-react-native
Token Storage	httpOnly cookie	js-cookie (browser)	AsyncStorage (insecure)
Deployment	Vercel	Vercel	Expo (managed)

3. Authentication Feature Comparison

Backend Auth System

Two independent auth systems:

- User Auth: For website users, admins, business owners. JWT 10-day expiry, bcrypt 12 rounds, httpOnly cookie
- Member Auth: For QR-card loyalty members. Phone+password login, bcryptjs 10 rounds, 7-day JWT

Login Flow Comparison

Feature	Website	Mobile App
Email/Phone login	Yes - single input	Yes - single input
Password show/hide	Yes	Yes
Auto-login after register	Yes	Yes
Token storage	Cookie (js-cookie)	AsyncStorage
JWT decode	jwt-decode library	Manual base64
Role-based redirect	Yes	Yes
Forgot password	RTK Query endpoint	RTK Query endpoint
Reset password	RTK Query endpoint	Raw fetch (hardcoded URL)
Logout API call	Yes - POST /auth/logout	No - just clears local
Member fallback login	Separate page	Same screen fallback

Route Protection

- Website: 3 guard components + server-side cookie check + role-based admin guard
- App: No formal guards. All screens accessible. ProfileScreen checks token on focus only.

4. Business Registration Feature Comparison

When a business uploads or registers, the website has 21 feature areas. Here is the comparison:

Feature	Website	App Register	App Edit
1. Business Name	Yes	Yes	Yes
2. Category	API dropdown	API chips	API chips
Subcategory	API dropdown	MISSING	State exists, no UI
3. Description	Textarea	Multiline input	Yes
4. Facebook	Yes	MISSING	Yes
Website	Yes	Yes	Yes
LinkedIn	Yes	MISSING	MISSING
Twitter	Yes	MISSING	MISSING
Instagram	Yes	MISSING	Yes
5. Opening Hours	Toggle + time pickers	Hardcoded default	Toggle only
6. Operational Period	Label (no actual)	MISSING	MISSING
7. Halal Service	Toggle	Toggle	Toggle
8. Home Delivery	Toggle	Toggle	Toggle
9. Online Service	Toggle + link input	MISSING	MISSING
10. In-Store Pickup	Toggle	MISSING	MISSING
11. Parking	Toggle	Toggle	Toggle
12. Table Reservation	Conditional toggle	MISSING	MISSING
13. Special Discount	Toggle	Hardcoded false	MISSING
14. Wheelchair	Toggle	Hardcoded false	MISSING
15. Payment Methods	9-option multi-select	Empty array	Empty array
16. Address	Yes	Yes	Yes
Country	Dropdown	Free text	Free text
Post Code	Yes	Yes	Yes
City	Dropdown	Free text	Free text
Multiple Locations	Yes + sub-branches	Hardcoded false	MISSING
17. Language	99-lang dropdown	Free text	MISSING
18. Business Logo	Upload + preview	ImagePicker	ImagePicker+camera
19. Gallery Images	Multi-upload + thumb	MISSING	MISSING
20. Video Upload	Video upload	MISSING	MISSING
21. Terms & Conditions	Checkbox	Toggle	MISSING

Category/Subcategory source: Fetched from API (GET /api/v1/category), NOT hardcoded.

5. Order Pad Feature Comparison

Backend Order Schema

Order model stores: business_id, user_id, tableNo, notes, items[] (with lineId, productId, name, price, quantity, selectedOptions), totalQty, subtotal, membershipDiscount, currency, status (pending/completed/cancelled). No auth on any order endpoint.

Order Pad Comparison

Feature	Website	Mobile App	Backend
Order pad UI	Full (1316 lines)	Full (732 lines)	N/A
Restaurant-only gating	Yes (regex check)	NO - shown to ALL	N/A
Product categories	API fetch	API fetch	Product model
Product options/variants	Modal picker	Modal picker	selectedOptions[]
Table number	Input field	Input field	tableNo field
Notes	Textarea	Textarea	notes field
Membership discount	Serial lookup	Serial lookup	membershipDiscount{}
Order list	With filters	With status	listOrders endpoint
Edit order	Full	Full	updateOrder endpoint
Receipt/PDF	Print page works	Screen exists, unreachable	N/A
Customer cart checkout	WhatsApp only	STUB (Alert only)	No payment module
Order status	3 states	4 states (+preparing)	3 states
Real-time updates	No	No	No WebSocket
Kitchen display	No	No	No
Payment integration	No	No	No
Split bills	No	No	No

6. Critical Issues - Broken / Stubs in App

These features exist in the app but are broken or incomplete:

Cart checkout is a stub

Alert.alert('Checkout flow coming soon') - no order creation or payment

GenerateReceiptScreen unreachable

Screen exists and is registered but nothing navigates to it with proper params

Reset password uses raw fetch

Hardcoded URL bypasses API layer, no error handling, ignores app.json config

Favorites are device-only

AsyncStorage only - lost on reinstall, not synced to backend for logged-in users

Business offers screen has mock data

Hardcoded data with zero API/backend integration

Business promote screen has mock data

Hardcoded data with zero API/backend integration

Member dashboard visit history is stub

Returns Promise.resolve({ data: [] }) - no real API call

PDF receipt in order list is stub

Shows Alert instead of navigating to GenerateReceiptScreen

Order list uses old axios, not RTK Query

listOrders RTK Query defined but never imported or used

ChangePassword calls wrong endpoint

Sends JWT to reset-password endpoint instead of update-password

Logout doesn't call API

Just clears AsyncStorage, never calls POST /auth/logout

No restaurant category gating

Order pad shown to ALL business types, not just restaurants

7. Missing Features - Website Has, App Doesn't

Feature	Website	App
Restaurant-only gating (isRestaurant check)	Hides order pad from non-restaurants	Order pad shown to ALL businesses
QR code view/download (member)	Full member QR code tab	Not in app
Member deactivation requests	Submit + view history	Not in app
Day offers management	Create/list/apply day-of-week offers	Not in app
Bulk product discount	Apply discount to multiple products with date range	Not in app
Product options CRUD	Create/edit option groups (size, spice, etc.)	Not in app
Leads management	Add/remove members as leads, send promotions	Not in app
Business analytics	Visitor count + monthly breakdown	Not in app
Member verification (QR scan)	Verify by slug/serial	Not in app
Restaurant offers browse	Filter by country/city/discount	Not in app
Contact us form	Sends message via API	Not in app
How it works page	Explainer page	Not in app
Site testimonials	Public testimonials	Not in app
Sub-branch/multiple locations	Full branch system	Hardcoded false
User dashboard	Has route (empty placeholder)	Not in app
Product management in app	Full CRUD with discount + date window	Partial - basic CRUD only

8. Partial Features - Incomplete in App

Feature	Website (Full)	App (Partial)
Opening hours	Toggle + time pickers (30-min increments)	Toggle only, no time editing
Country/City selection	Dropdowns with data files	Free text inputs
Language selection	99-language dropdown	Free text / hardcoded 'English'
Gallery images	Multi-upload + thumbnail selection	Logo only, no gallery
Video upload	Video upload component	Missing entirely
Payment methods	9-option multi-select dropdown	Hardcoded empty array
Social media fields	All 5: FB, IG, LinkedIn, Twitter, Website	Only Website (+ FB/IG in Edit only)
Edit business form	Full form with all 21 fields	Missing 12+ fields
API layer consistency	RTK Query only	Dual layers: RTK Query + legacy axios
Token security	httpOnly cookie (backend-set)	AsyncStorage (JS-readable, insecure)
Error display	Inline + toast (non-blocking)	Native Alert dialogs (blocking)
Form validation	react-hook-form with inline errors	Manual pre-submit + Alert dialogs

9. Working Features - Both Website and App Have

- Authentication (login, register, forgot password)
- Home screen with featured businesses, banners, sliders
- Business search with filters (category, location, rating)
- Business list and detail pages
- Category browsing
- Product detail viewing
- Reviews (list + submit)
- My reviews
- Bookings (create + manage)
- My bookings
- Rota management (roles, employees, shifts)
- Fridge temperature logging
- Waiter order pad (core flow: browse, add, options, cart, submit)
- Order list with status updates
- Edit order (items, qty, status, notes)
- Profile edit
- Change password
- Settings
- About, Terms, Privacy, FAQ, Help pages
- Admin screens (banners, members, reviews, settings, sliders, testimonials)
- Notifications
- Member login and registration
- Cart (add/remove/quantity management)

10. Full Screen Inventory - Mobile App (62 screens)

Working (API-integrated, functional) - ~30 screens

- LoginScreen - Token + role fetch
- RegisterScreen - Member/business registration
- ForgotPasswordScreen - Email-based reset request
- HomeScreen - Featured businesses, banners, sliders
- SearchScreen - Filter by category, location, rating
- BusinessDetailScreen - Full profile, reviews, location map
- BusinessListScreen - Paginated list with filters
- CategoryListScreen - Browse by category
- ProductDetailScreen - Product info, add to cart
- CartScreen - Local state only (no checkout)
- OrderHistoryScreen - Past orders for members
- OrderDetailScreen - Single order view
- ProfileScreen - User info, edit profile
- EditProfileScreen - Update user details
- ChangePasswordScreen - Password update
- ReviewsScreen - List + submit reviews
- MyReviewsScreen - User's own reviews
- BookingScreen - Create/manage bookings
- MyBookingsScreen - Booking history
- RotaScreen - Staff rota management
- FridgeScreen - Fridge/inventory management
- WaiterOrdersScreen - Waiter order queue
- NotificationScreen - Push/in-app notifications
- SettingsScreen - App settings, logout
- AboutScreen, ContactScreen, TermsScreen, PrivacyScreen, FAQScreen, HelpScreen - Static pages

Stub / Incomplete - 5 screens

- BusinessOffersScreen - Hardcoded mock data, zero API integration
- BusinessPromoteScreen - Hardcoded mock data, zero API integration
- MemberDashboardScreen - Visit history returns empty array stub
- CartScreen - Checkout button is a stub (Alert only)
- FavoritesScreen - AsyncStorage only, no backend sync

Broken / Non-Standard - 3 screens

- ResetPasswordScreen - Raw fetch to hardcoded URL, bypasses API layer
- FavoritesScreen - Lost on app reinstall, not shared across devices
- GenerateReceiptScreen - Exists but unreachable (nothing navigates to it)

11. Backend API Analysis

User Auth Endpoints

Method	Path	Auth
POST	/api/v1/users/register	No (multer for file)
POST	/api/v1/auth/login	No
POST	/api/v1/auth/logout	No
POST	/api/v1/auth/forgot-password	No
POST	/api/v1/auth/reset-password/:token	No
GET	/api/v1/users/me	Yes (any role)
PUT	/api/v1/users/:id	Yes (any role)
DELETE	/api/v1/users/:id	Yes (admin only)

Business Endpoints

Method	Path	Auth
POST	/api/v1/business/register	Yes (Admin/User/BusinessOwner)
GET	/api/v1/business	Public
GET	/api/v1/business/list	Public
GET	/api/v1/business/:slug	Public
PUT	/api/v1/business/:slug	Yes (Admin/BusinessOwner)
DELETE	/api/v1/business/:slug	Yes (Admin/BusinessOwner)

Order Endpoints (NO AUTH on any)

Method	Path	Auth
POST	/orders/create	No auth
GET	/orders?business_id=&user_id=&status=	No auth
GET	/orders/:id?business_id=	No auth
PUT	/orders/:id	No auth
DELETE	/orders/:id?business_id=	No auth

Note: All order endpoints lack authentication. Tenant isolation relies only on business_id in queries.

12. Security Gaps

Mobile App

- Token stored in AsyncStorage (insecure) - expo-secure-store is installed but NOT used
- Token is fully accessible via JavaScript at all times
- JWT decoded client-side without signature verification
- No token expiry checking - app never checks if token is expired
- No request retry on 401 - ProfileScreen clears token, other screens show generic error
- No refresh tokens - single access token only
- No CSRF protection
- ResetPasswordScreen bypasses API layer with raw fetch to hardcoded URL

Backend

- No rate limiting on any endpoint (login, register, password reset)
- No email verification on signup
- No refresh token rotation - refresh secret defined but never used
- All order endpoints have NO authentication
- Reset password uses same JWT secret as access token (should use separate secret)
- Phone number unique index is dropped on every registration (allows duplicates)
- No inventory/stock tracking for products
- No validation that referenced products exist when creating orders

Website

- Token in JS-readable cookie (no httpOnly flag on client side)
- No refresh token logic
- Client-side route guards can flash protected content before redirect
- Logout bug: removes 'accessToken' cookie instead of 'desiTrackerToken'

13. Dead Code in Mobile App

The app has significant unused code that adds complexity without providing value:

authSlice.js: Redux auth reducer is registered in the store but NEVER dispatched. `setAuth` is never called. `isAuthenticated` flag is never read by any component. All auth state flows through the Axios-layer `getToken()/getRole()`.

authApi.js (RTK Query): Endpoints defined (`registerUser`, `loginUser`, `logoutUser`, `forgotPassword`, `resetPassword`) but only `forgotPassword` and `resetPassword` are used. The `register/login` RTK endpoints are NEVER consumed - the Axios layer is used instead.

memberApi.js (RTK Query): `registerMember` and `loginMember` mutations are never used. The Axios layer `memberApi` is used instead.

expo-secure-store: Installed as a dependency but NEVER used for auth token storage. Tokens are stored in insecure `AsyncStorage`.

listOrders RTK Query: Defined in `ordersApi.js` but never imported or used. `BusinessOrdersScreen` uses the older axios wrapper instead.

GenerateReceiptScreen: Registered in `AppNavigator` but nothing navigates to it with proper params. The screen is completely unreachable.

14. Summary & Recommendations

Overall Completion: ~60%

The mobile app has a functional core (auth, business discovery, order pad, reviews, bookings, rota, fridge) but is missing critical business features and has several broken/stub implementations.

Priority 1 - Fix Broken Features

- Connect GenerateReceiptScreen to order list (PDF receipt download)
- Implement cart checkout flow (create order from customer cart)
- Fix ResetPasswordScreen to use RTK Query instead of raw fetch
- Sync favorites to backend for logged-in users
- Wire BusinessOffersScreen and BusinessPromoteScreen to real APIs
- Fix MemberDashboardScreen to call real visit history API

Priority 2 - Add Missing Features

- Add restaurant category gating (isRestaurant check) to hide order pad from non-restaurants
- Add QR code view/download for members
- Add member deactivation request flow
- Add day offers management
- Add leads management (add/remove/promote)
- Add business analytics (visitor count)
- Add member verification (QR scan)
- Add restaurant offers browse (filter by country/city/discount)

Priority 3 - Improve Partial Features

- Add time pickers to opening hours (not just toggle)
- Convert Country/City to dropdowns
- Add gallery image multi-upload and video upload
- Add payment methods multi-select
- Add all social media fields to registration
- Complete EditBusinessScreen with all fields
- Consolidate dual API layers (remove dead axios code)

Priority 4 - Security

- Move token storage from AsyncStorage to expo-secure-store
- Add token expiry checking
- Add 401 retry/refresh logic
- Add auth to order endpoints on backend
- Add rate limiting on backend auth endpoints
- Add email verification on signup
